 $\mathring{a} \Ha^* \pm \mathring{a} \mathring{a} \ra^* \mathring{a} \ra^* \mathring{e} \ra^* - \mathring{e}, @ \ra^* \times \mathring{e}^{\mathsf{TM}} \ra^* \ra^* - \mathring{e} \ra^* \mathring{e} \ra^* - \mathring{e} \ra^*$

The above work can hardly be regarded as a nice match for a couplet.

- 1. Unlike å′‡ and å³» being similar in meaning, æ™ and æš® are contrary to each other.
- 2. èŒ,æž—è,,©ç «¹=adj+n+adj+n, but æ~¥ç...§ç§ ⟨é™°=adv+v+adv+v, which is not matched.

My humble try:

æ¸...浕激湕湧泉飛瀑 崇山峻嶰èŒ,æž—è,©ç«¹

The reason why they're matched (though not perfect):

èŒ,æž—è,©ç«¹ is what can be seen as the impressive scenes in 崇山å³»å¶⁰; 湧泉é£∘瀑 is what can be found as the attractive views in æ,…浕激湕.

Secondly, the first part ends with a ä», 蕲 word, while the seocnd part ends with a 平蕲 word, which associates with tone.
