Hello All Members & Viewers

Here it comes as promised!

Construct an 8 by 8 (64-square) diagram with all the columns, rows and the two diagonal lines, each having a constant of 924.

There's no restriction on the numerals to be used.

Easy! Right?

Good Luck to all!

ps: Shall we "bar" Lady Futari from participation until the next round when I will specify the series of numerals to be used?

No hard feelings, Lady

  It's just too easy for you!

Deal! This is exactly what I have in mind.
