I found there is a free software called "mp3DirectCut". It can help you to

mp3DirectCut is a frame based editor for MPEG audio. You can set regions for cutting or changing the volume like in common audio editors. At all operations the file will not be re-encoded. This saves time and disk space and prevents loss of audio quality. You can easily navigate through even large files and mp3DirectCut gives you a visualisation of the MP3 audio data.
